

Earthwatch Institute (EWI) is an international nonprofit organisation that supports scientific field research by offering members of the public unique opportunities to work alongside leading field research scientists. The Research Program at Earthwatch supports a diversity of research projects of high scientific merit worldwide, which address critical environmental and social issues at local, national, and international levels. Scholars interested in Earthwatch support should submit a preliminary proposal describing planned research, field methods and the need for EWI volunteer field assistants. If funding for the proposed research is deemed appropriate, a detailed full proposal will be invited for peer review.

We are pleased to announce that the following projects have been approved for EWI support for the 2003 fiscal year (October 2002 - September 2003).
