

Request for Proposals for Field Research: European and UK Terrestrial Biodiversity

Earthwatch Institute is an international non-profit organization with the mission to “**engage people worldwide in scientific field research and education to promote the understanding and action necessary for a sustainable environment.**”

The research should focus on understanding and reducing direct pressures on terrestrial biodiversity and/ or enhancing the status of species and ecosystems across protected, private and/or communal lands. Of particular interest are research programs which attempt to find solutions to pressing conservation issues through interdisciplinary and novel approaches, and which work with local stakeholders to support the sustainable management of biodiversity and enhanced livelihoods. Earthwatch is currently seeking proposals from field-based researchers to provide grants to address UK and mainland Europe terrestrial species. We have particular interest in the following species: otters, deer, wolves, bears, red squirrels, badgers, fox, or hedgehogs.

Earthwatch will only consider proposals for field research that have a strong rationale for requiring involvement of non-specialists (Earthwatch volunteers) in a variety of scientific tasks. Earthwatch volunteers are highly motivated citizens from around the world who are interested in improving environmental understanding. A typical project would engage a minimum of 30 volunteers over 3-10 teams per annum. Average team size is 4-12 participants and each team typically can spend 3-12 days in the field. Students are increasing becoming a priority audience for Earthwatch; therefore ideal projects have flexibility to engage audiences such as students (age 16+) and/or groups (15-30 participants). All projects are conducted in English.

Earthwatch encourages proposals that are interdisciplinary and/or transnational. Preference will be given to projects that directly contribute to environmental or social change on the ground and that have a strong community and/or educational component. Professionals from any nationality are eligible to apply.

Concept Notes and Proposals

Concept Notes for projects starting in spring or summer 2013 will be accepted through Friday, January 27, 2012. Invitations for full Research Proposals will be communicated in late February. Applications are to be submitted in English. You can submit a Concept Note here: <http://fs22.formsite.com/EarthwatchResearch/ConceptNote/index.html>

Research topics that may be considered for funding include, but are not limited to:

- *Increasing the understanding of the ecology and conservation of wildlife and other biodiversity within the context of human environments within/near a major metropolitan landscape.*
- *People and wildlife – sustainable use of wildlife, human-wildlife conflict, competition for resources, habitat degradation/ fragmentation, stakeholder perceptions, sustainable livelihoods, environmental education.*
- *Conservation biology – restoration ecology, measures for depleted species, conservation genetics, behavioural ecology, population dynamics, landscape scale conservation/ networks/ corridors.*

Grants

An average annual grant of \$20,000 USD is available to cover research related costs, which can include the following if appropriate: equipment (under \$1000 USD), tools, supplies, research permits, scientist transport to the field, support staff, staff and scientist food and accommodation while running volunteer teams. The grant cannot be used for scientist salaries, overhead, capital equipment, and other expenses not directly related to the project. Volunteer costs in the field (volunteer accommodation, food and transport in the field) will be budgeted for in partnership with Earthwatch. The field research proposals are tenable for three years, and potentially renewable in the fourth year.

Additional

- Comfortable accommodations for the proposed project must be located a reasonable travel distance from the research site(s) in order to travel back and forth daily.
- Time for scheduled recreational activities enabling volunteers to explore the surrounding area and experience cultural aspects are encouraged.
